PREFACE ....................................................... v
CRITICAL CENTERS OF BRAIN FUNCTION ...................... vi-vii
INTRODUCTION ............................................... viii

EXECUTIVE & SOCIAL FUNCTION ........................................ 1

5  What part of your brain causes you to respond as a unique individual?
13  Your right frontal lobe registers negative emotions: how that fact can be useful to you
19  How to read deceit: false smiles and happy smiles
23  How odor influences a woman’s mate selection
27  A type of logic puzzle that often applies to real-life situations
31  How to make yourself feel happier without drugs
33  The night a middle-aged man tackled his bureau in his sleep
37  How self-conscious are you?
41  If you’re immoral and lazy, you may not be able to blame your parents
49  “Show me the child at seven . . . a genetic clue to personality”
55  Physical exercise helps the brain grow

MEMORY FUNCTION ..................................................... 59

63  “Your memory” is, in fact, many processes that occur in different parts of the brain
67  Imagine a memory-enhancing drug that would make you remember everything the first time it happens . . .
73  You can still use some kinds of knowledge even if you don’t know you have them
77  A major cause of forgetting
79  What your eyes reveal about how hard you’re thinking: LEMS and pupil size
81  If you want to remember complex data, visualize it — geniuses do
89  Giving your undivided attention helps you think, remember, and react effectively
93  Why are stories easier to recall than lists?
98  A little stress helps memory, but too much destroys it
105  “Now where did I put my Prozac?”
107  Can challenging mental activity throughout life forestall age-related cognitive decline?
113  As they age, most people tend to notice problems with their “working” memory
120  Normal decline of very short-term memory shows up in some tests of older people
123  New hope for those at risk for Alzheimer’s: stem cell therapy and vaccines

EMOTIONAL FUNCTION .................................................. 127

131  It’s cheaper than gin
133  How to feel teal: color and mood
137  Self-illusions are good for you
143  How the brain recognizes fear
146  Could you make a life or death decision based on someone’s facial expression?
147  “Watch two Marx brothers movies and call me in the morning”

CONTENTS

150 Are you phlegmatic? Would you choose to be more sanguine if it were as easy as taking an aspirin?
163 Why are women more linguistically “balanced” than men?
167 What is the brain so busy doing, and not doing, while we sleep?
175 Verbalizing unpleasant experiences helps physical health
179 Why are you not surprised that your immune responses and brain are linked together?

LANGUAGE FUNCTION
187 Injuries help to map the brain’s language regions
191 A new approach to treating dyslexia
196 Women are more linguistically “balanced” than men
203 How a child begins to speak a complex language before it can even put on its socks
207 Educating babies
209 Around the turn of the first year, the infant . . . begins to produce recognizable words in the language spoken around him

MATH FUNCTION
233 Are human infants born with number skills?
237 “Idiot” savants
239 Brain-changing nutrition and the “post-lunch dip”
243 Lack of sleep . . . reduces problem-solving ability
247 The genius who thought in pictures but expressed his ideas in math
251 The magical number 7: How it limits us, and how we can overcome it

SPATIAL FUNCTION
259 Seeing both the forest and the trees: Different parts of the brain are specialized for different visual tasks
263 Facial recognition depends on visual-spatial processing by the right side of your brain—but that’s not all
269 A gene for visual-spatial ability
272 Nicotine improves spatial memory, learning, and information processing. Some research suggests that it lessens memory deficits associated with aging and Alzheimer’s
275 Which way do we go? A story of two different strategies
279 “Blindsight,” a surprising finding, and other curiosities: the riddle of consciousness
283 Seeing without understanding: visual object agnosia
286 A circadian rhythm and sunlight tell us when to sleep
